

#	Question	Expected Correct Answer
1	What is the purpose of a Permit to Work (PTW) system?	To ensure hazardous work is formally authorized, risks are assessed, necessary precautions are implemented, and responsibilities are clearly assigned before work begins.
2	Name at least three jobs that typically require a Permit to Work.	Hot work, confined space entry, electrical isolation, excavation, working at height, line breaking.
3	What is considered hot work?	Any activity that generates sparks, flames, or sufficient heat to ignite combustible materials (e.g., welding, cutting, grinding).
4	What is a confined space?	An enclosed or partially enclosed space not intended for continuous occupancy, having limited entry/exit, and capable of containing hazardous atmospheres or other serious hazards.
5	List the primary atmospheric hazards that must be checked before confined space entry.	Oxygen deficiency/enrichment, flammable gases or vapors, and toxic gases.
6	Why is Lockout/Tagout (LOTO) performed?	To isolate hazardous energy sources and prevent unexpected startup or release of stored energy during maintenance.

7	What are the basic steps in a Lockout/Tagout procedure?	Notify personnel, shut down equipment, isolate energy, apply locks/tags, release stored energy, verify zero energy, perform work, remove locks safely, restore operation.
8	What is the hierarchy of hazard controls?	Elimination, substitution, engineering controls, administrative controls, personal protective equipment (PPE).
9	What should be included in a Job Safety Analysis (JSA)?	Job steps, hazards associated with each step, risk evaluation, and required control measures.
10	When should PPE be used?	After higher-level controls are implemented or when residual risk remains that cannot be eliminated by other controls.
11	What information should an incident report contain?	Date/time, location, people involved, description of the event, immediate causes, root causes, corrective actions, and preventive measures.
12	What is a near miss?	An unplanned event that did not cause injury or damage but had the potential to do so.
13	Why are safety audits conducted?	To verify compliance, identify hazards, evaluate effectiveness of safety systems, and recommend corrective actions.
14	What is the purpose of emergency response planning?	To minimize harm to people, property, and the environment through predefined procedures for emergencies.

1 5	What should a fire emergency procedure generally include?	Alarm activation, evacuation, emergency communication, firefighting (if safe), rescue, assembly points, and accountability of personnel.
1 6	What is a risk assessment?	The systematic process of identifying hazards, evaluating likelihood and severity, and determining appropriate control measures.
1 7	Who is responsible for workplace safety?	Management, supervisors, employees, and contractors all share responsibility according to their assigned roles.
1 8	What documents should accompany contractor work on-site?	Valid work permit, risk assessment/JSA, competency records, required certifications, and applicable PPE compliance documentation.
1 9	Before beginning maintenance on energized equipment, what must be verified?	Energy isolation, zero-energy state, proper lockout/tagout, authorization, and safe work permit where applicable.
2 0	What are the objectives of safety training?	Improve hazard awareness, ensure regulatory compliance, develop safe work practices, and prepare personnel for emergency response.
